- Process: As moulding exits coater, it is moved by belt conveyor to (2) arms which lift the piece up-and-over the top of the Stacker Station; coming down the other side, it places the moulding onto (2) arms, and a belt conveyor transfers the piece onto the 11-tier Drying Cart.
- Lifting can be triggered by electric photoeye to determine position of off-feed arms (arms move down as each tier of the rack is filled) and place moulding on the rack (indexing back-to-front).
- One rack included; additional racks, each ...\$ 900.

Machine overall dimensions: 3,400 x 2,300 x 2,200' weight: 1,200 kG.
